SUMMARY

Frontend developer with 3+ years of experience, mostly working with React, Next.js, and TypeScript. I've built large products end to end — an auto-parts marketplace, a fuel-station management platform, a school management system, handling everything from the API layer to the final UI. I care about writing code that's still easy to work with as a product grows, and about getting Arabic/RTL support actually right, not just translated.

TECHNICAL SKILLS

Languages: HTML5, CSS3, JavaScript (ES6+), TypeScript, SQL

Frameworks: React.js (18/19), Next.js (App Router, 13–16), Redux Toolkit, RTK Query, React Query

Styling & UI: Tailwind CSS (v3/v4), Radix UI / shadcn, Material UI, Bootstrap, SCSS, LESS, Framer Motion, Embla Carousel

Architecture: Atomic Design, Component-Driven Development, Modular & Feature-Based Architecture, Backend-for-Frontend (BFF), Clean Code

Integrations: Firebase (Firestore, Cloud Messaging, Admin SDK), Google Maps API, EmailJS, Axios, React Hook Form + Yup, Formik, WebSockets

Data & Charts: RTK Query normalized caching, Recharts, D3.js, FullCalendar, jsPDF/html2canvas, JSZip

Concepts: RESTful APIs, RBAC, Responsive Design, SSR/SSG, Web Performance Optimization, Accessibility (a11y), Cross-Browser Compatibility, i18n / RTL

EXPERIENCE

Frontend Developer

2025 – Present

ChinaParts (Product-Based Startup) — Remote, Saudi Arabia

- **Built the customer-facing storefront** for a multi-vendor auto-parts marketplace as the sole frontend developer on the project — vehicle-fitment search, multi-seller checkout, wallet, and real-time seller chat — fully localized in English, Arabic, and Chinese with RTL support.
- **Built the seller dashboard** for the same marketplace: seller onboarding and identity verification, a 4-step product wizard, order fulfillment and RMA, payouts, and a sales analytics dashboard.
- **Architected the BFF layer for both platforms** — 99 and 79 Next.js Route Handlers respectively — proxying a Laravel API with httpOnly-cookie auth so no token is ever exposed to client-side JavaScript.
- **Shipped the Petrobe platform from scratch**, a multi-tenant SaaS for fuel-station franchise networks covering HR, task management, maintenance, and dynamic role-based access control.
- **Cut new-feature turnaround time** across all three products by standardizing on Atomic Design and RTK Query, with 50+ API slices total using normalized, tag-based caching.

Frontend Developer

July 2023 – October 2024

MagdSoft (Software House) — Nasr City, Egypt

- **Delivered 4+ client projects end-to-end**, owning frontend architecture, API integration, and production optimization across government, real estate, healthcare, and e-commerce.
- **Baraqla (Saudi Government):** built a government e-letter platform with complex multi-step forms and secure API flows, now used by thousands of civil servants.
- **Rawaseem Real Estate:** launched a bilingual property marketplace with map integration and real-time Firebase features, making property search faster and more intuitive.
- **Tahaliluk Medical Labs:** built booking and lab-results features for a medical platform running across 5+ branches.

- **E-Commerce Platform:** built the full shopping experience — search, filtering, cart, and checkout — cutting page load time by ~25%.

Freelance Frontend Developer

2023 – Present

Remote

- **Tadawul Academy:** built an educational platform on Next.js with SSR for stronger SEO, and integrated a GoAffPro affiliate system.
- **Advanced Universal Quality:** delivered a corporate website scoring 90+ on Lighthouse, with strong accessibility and mobile support.

SELECTED PROJECTS

Deeper look at the platforms above, plus additional client work. Each entry opens with what the product does; bullets below detail how it was built.

ChinaParts — Multi-Vendor Storefront

Next.js 16 · React 19 · TypeScript · RTK Query · Tailwind CSS 4 · Firebase

Customer-facing storefront for a multi-vendor auto-parts marketplace, where one order can span several independent sellers. Built the full buyer journey — finding the right part for a specific car, checkout, payment, delivery tracking, returns, and support — as the sole frontend developer on the project, in English, Arabic, and Chinese with full RTL support.

Scope: 28 routes · 99 API endpoints

- **Built the frontend from scratch** on Next.js 16 App Router with React 19, using Atomic Design to keep the component library maintainable as the product grew.
- **Built a Backend-for-Frontend layer** of 99 route handlers proxying a Laravel API, storing the session token in an httpOnly cookie so it's never exposed to client-side JavaScript.
- **Built the data layer as 23 RTK Query slices** with normalized caching and tag-based invalidation, keeping cart, favorites, and order state consistent without manual refetching.
- **Built a multi-seller checkout** that splits one basket into per-seller sub-orders, compares shipping rates per seller, and hands off to a payment gateway with session-persisted recovery.
- **Built a vehicle-fitment engine ("My Garage")** letting buyers save their cars and filter the catalog down to parts that actually fit, searchable by vehicle or by part number.
- **Delivered full EN/AR/ZH localization** (1,200+ keys) with server-rendered translations and complete RTL support, plus real-time buyer-seller chat and push notifications through Firebase.

ChinaParts — Seller Dashboard

Next.js 16 · React 19 · TypeScript · RTK Query · Tailwind CSS 4 · Recharts · Firebase

Business-side portal for the same marketplace, letting sellers manage their own store: onboarding and identity verification, product listings, orders, returns, payouts, and customer support.

- **Built a full seller portal** covering onboarding and identity verification, catalog, orders, returns, payouts, analytics, and support ticketing.
- **Implemented a 4-step product wizard** with variants, dynamic category attributes, and vehicle-compatibility matching, with per-step server persistence and dirty-checking.
- **Delivered end-to-end order fulfillment** — status pipeline, shipping-label generation, carrier tracking, delivery-proof uploads — plus a complete RMA flow (approve/reject/receive/inspect).
- **Built a sales analytics dashboard** with KPI cards and Recharts trend/pie/bar charts, and a wallet module with transactions, reserves, and bank withdrawal requests.

Petrobe — Multi-Tenant Fuel Station Management Platform

Next.js 16 · React 19 · TypeScript · RTK Query · Tailwind CSS 4

Enterprise SaaS platform that lets fuel-station franchise networks run their whole operation from one dashboard — station operations, HR, performance reviews, maintenance, quality inspections, complaints, and public customer feedback, across 30 domain modules.

- **Built a true multi-tenant system** where each franchise has its own branding, usage quotas, contract lifecycle, and settings, with super-admins able to switch tenant context on the fly.
- **Implemented a dynamic RBAC layer** of 142 granular permissions loaded at runtime, gating routes, navigation, and individual UI actions.
- **Built a Backend-for-Frontend layer** of 91 route handlers that hides the upstream API origin and key, and handles authentication through httpOnly cookies instead of client-side token storage.
- **Delivered a multi-stage performance-appraisal workflow** moving from employee to line manager to HR to general manager, scored against a configurable competency framework with full audit history.
- **Shipped a fully trilingual (EN/AR/ZH) interface** with RTL support and Hijri date handling, built on an Atomic Design component system and deployed to staging and production via GitHub Actions.

Ciro Pay — Fintech Marketing & Developer Portal

Next.js 16 · React 19 · TypeScript · Tailwind CSS 4 · Framer Motion

Marketing website and developer portal for a Saudi payments company, used to explain the product to customers and onboard developers integrating its API.

- **Built a bilingual (AR/EN) marketing and developer portal** for a Saudi payments platform on Next.js 16 with the React Compiler enabled for automatic memoization.
- **Architected the UI with Atomic Design** and made the entire site content-driven from JSON locale files (1,100+ translation keys).
- **Built a JSON-schema-driven legal document renderer** and an interactive developer portal — code-sample switcher, API explorer, and sandbox mockups — plus EmailJS-powered contact and support forms.

Wesada — Bilingual Luxury Furniture Showroom

Next.js 16 · React 19 · TypeScript · Tailwind CSS 4 · RTK Query

Digital showroom for a Saudi furniture brand, built Arabic-first for a luxury retail audience browsing collections and products online.

- **Built a bilingual (AR/EN) digital showroom** with RTL as the default orientation — CSS logical properties, Arabic numeral and currency formatting, and full Arabic pluralization rules.
- **Architected a typed RTK Query data layer** over 8 REST endpoints with per-resource cache-tag invalidation and per-request store isolation to prevent SSR cache leakage between visitors.
- **Implemented server-rendered SEO** (JSON-LD, hreflang, dynamic sitemap) and a defensive rendering layer that gracefully handles an incomplete CMS, plus a full custom Tailwind v4 design system.

CentriX — Multi-Tenant Educational Center Management Platform

Next.js 16 · React 19 · TypeScript · RTK Query · Tailwind CSS v4 · i18next

Full SaaS platform for running educational centers, with separate portals for super admins, center admins, teachers, and students, plus a public parent lookup.

- **Built a Backend-for-Frontend layer** of ~100 route handlers proxying a Laravel API, keeping auth tokens in httpOnly cookies and enforcing role-based access and locale routing at the middleware level.
- **Implemented direct-to-S3/R2 multipart uploads** for large video files, with presigned part signing, live progress, and automatic abort — taking uploads entirely off the application server.
- **Built an online exam engine** with an image-supported question bank, anti-cheating shuffling, scheduled windows, a resilient student attempt flow, and auto-graded results.
- **Built attendance and live-session management**, covering session start/end, real-time roll call, bulk enrollment, and a color-coded monthly attendance calendar.
- **Built the SaaS control plane**, handling tenant provisioning, subscription plans, and per-tenant quota enforcement across storage, students, teachers, classrooms, and exams.
- **Designed a weekly timetable grid** with a custom lane-assignment algorithm to render overlapping class sessions per room without collisions, and shipped full Arabic/English i18n with RTL support.

EDUCATION

Bachelor of Science in Computer Science | 2025

Mansoura University — Mansoura, Egypt

SOFT SKILLS

Problem-solving & analytical thinking · Clear communication with technical and non-technical stakeholders · Works independently and cross-functionally · High attention to detail and UI/UX quality · Time management & prioritization · Continuous learning mindset
